ARX KEYBOARD

Full-size mechanical keyboard, custom PCB built around an ESP32-S3. 6x17 switch matrix, BLE only. No wired HID since the WROOM-1 doesn't do native USB. Two-piece case, red top shell over a blue base, designed in Fusion 360 and printed to match hole-for-hole with the PCB mounting points. Standard bottom row, no ISO enter, full nav cluster on the right. Running KMK on the firmware side.
